## **DETAILED ACTION**

### ***Priority***

1. The amendment to the specification filed 01 April 2004 perfects the claim for priority to International Application PCT/IB99/00734 and the benefit of U.S. Provisional Application No. 60/082692. The applicants should receive a corrected filing receipt under separate cover.

### ***Claim Rejections - 35 USC § 102***

2. The rejection of claims 5-7, 11, 14, 16, and 17 under 35 U.S.C. 102(b) as being anticipated by Chen et al. in the Office action mailed 01 October 2003 is withdrawn in view of the perfection of the claim for priority discussed above.
3. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(a) the invention was known or used by others in this country, or patented or described in a printed publication in this or a foreign country, before the invention thereof by the applicant for a patent.

4. Claims 5-7, 11, 14, 16, and 17 are rejected under 35 U.S.C. 102(a) as being anticipated by Chen et al.

The claims are drawn to a method of distinguishing between different classes of signals from microarray hybridization data by distinguishing between overlapping data signals. In some embodiments the data are processed to distinguish between outputs from mixtures of signals.

Chen et al. shows in figure 1 a microarray that comprises two differently labeled fluorescent samples hybridized to probes on the microarray. Chen et al. shows maximum likelihood estimation of coefficient of variations used to distinguish between the two differently fluorescent-labeled samples on pages 372-373. Table 4 lists significant changes in expression

between the two samples that were detected by the method of Chen et al. that were not detected as significant by other prior art methods.

5. Applicant's arguments filed 01 April 2004 have been fully considered but they are not persuasive. The applicants state that Chen et al. does not show the claimed step of deconvolving overlapping data. Chen et al. shows a method of resolving levels of two differently labeled fluorescent probes from the same location of an array after hybridization of two probes to the array. Chen et al. therefore deconvolves data consisting of the levels of the two probes that physically overlap on the array. The claimed method is not interpreted to require more than that shown by Chen et al. and the rejection is maintained.

### *Conclusion*

6. Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

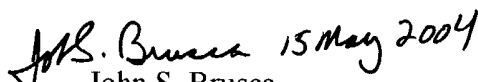

A shortened statutory period for reply to this final action is set to expire **THREE MONTHS** from the mailing date of this action. In the event a first reply is filed within **TWO MONTHS** of the mailing date of this final action and the advisory action is not mailed until after the end of the **THREE-MONTH** shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than **SIX MONTHS** from the date of this final action.
